Claims 5, 13 and 21 canceled.

Claim 4 is deleted in entirety and is replaced it with the following:

"A method of increasing a transmission rate, comprising:

waiting a poll time for an event to occur;

determining whether a pause frame has been received after waiting the poll time;

determining whether a minimum of an inter-frame spacing (IFS) has been reached if the pause frame has not been received; and

decreasing the inter-frame spacing for a number of frames by a value if the minimum of the inter-frame spacing has not been reached to increase the transmission rate."

Art Unit: 2664

Claim 9 is deleted in entirety and is replaced it with the following:

“An input/output controller, comprising:

a receiver circuit to determine whether a pause frame has been received; and

a logic circuit adapted to wait a pause time specified by the pause frame, to determine whether a maximum of an inter-frame spacing (IFS) has been reached if the pause frame has been received, and to increase the inter-frame spacing by a value if the maximum of the inter-frame spacing has not been reached to reduce a transmission rate.”

Claim 12 is deleted in entirety and is replaced it with the following:

“An input/output controller, comprising:

a receiver circuit to determine whether a pause frame has been received after a packet count value has been reached; and

a logic circuit adapted to wait a poll time for an event to occur before the receiver circuit determines whether the pause frame has been received, to determine whether a minimum of an inter-frame spacing (IFS) has been reached if the pause frame has not been received, and to decrease the inter-frame spacing for a number of frames by a value if the minimum of the inter-frame spacing has not been reached to train a transmission rate.”
